ZENITH SCHOOL OF AI · FOR NALIN · 24 OCT 2026, 12:52 IST

DNS records for play.zenithschool.ai

From Avi. The stall web app for KRMU Ideas 4.0 (27 and 28 Oct 2026) runs on AWS Lightsail in Mumbai. Generated by ops/aws/make-dns-pdf.mjs from AWS (certificate play-cert, service play-web).

Purpose: give the stall app its own address, play.zenithschool.ai, with a working HTTPS certificate.

The ask: in Cloudflare, add the **2 new CNAME records** below to zenithschool.ai. Every one must be **DNS only (grey cloud)**, not Proxied. Do not change or delete any existing record. Then reply to Avi: "play records saved".

The records (copy exactly, no spaces, no dot at the end)

#	TYPE	NAME (AS TYPED IN CLOUDFLARE) AND TARGET	PROXY STATUS

1	CNAME	Certificate check for play.zenithschool.ai
		Name
		`_1ec01722b926d22259ec3dbc51a5e097.play`
		Target
		`_c0177178ee2b118a7b6f6fd6c7c58bc6.wzccmgtwzk.acm-validations.aws`
			DNS only (grey cloud)

2	CNAME	Address of the stall app (play-web)
		Name
		`play`
		Target
		`play-web.864gs2gb85a24.ap-south-1.cs.amazonlightsail.com`
			DNS only (grey cloud)

Cloudflare click path (for each record)

1. dash.cloudflare.com, open **zenithschool.ai**.
2. Left menu **DNS**, then **Records**.
3. Click **Add record**.
4. Type **CNAME**. Paste the Name and the Target from the table.
5. Click the orange cloud so it turns **grey: "DNS only"**.
6. TTL **Auto**. Click **Save**.

Cloudflare adds ".zenithschool.ai" to each Name by itself.

Checklist

- ☐ Record 1 saved (_1ec01722b926d22259ec3dbc51a5e097.play)
- ☐ Record 2 saved (play)
- ☐ Every record shows the **grey cloud** (DNS only)
- ☐ No existing record was changed (exam, field, forecast, staging and the rest stay as they are)
- ☐ Replied to Avi: "play records saved"

What happens next

AWS checks the first record and issues the certificate, usually within about 30 minutes of the record being saved (inference, from the Field App certificates on 21 Oct 2026). Claude Code then attaches play.zenithschool.ai to the app. No further DNS work is needed from you. Why grey cloud: the orange cloud (Proxied) hides the record from AWS, so the certificate is never issued and the address breaks.

Records read from AWS Lightsail (ap-south-1) with get-certificates and get-container-services on 24 Oct 2026, 12:52 IST. After the event (from 29 Oct) these records can be deleted; they are harmless if left. Questions: Avi.
