EXPERIENCE 6 OF 7 · PLACEHOLDER CARD

AI Startup Studio

Apna startup, 90 second mein: pick a problem, and a team of AI agents builds the name, logo, pitch and a live one-page startup site.

Purpose: a short placeholder so counter 2 staff know the plan before the full card exists. **This experience is new and runs only if it passes its checks at the go/no-go on 26 Oct, 12:00.** The full card (setup, problems, screenshots) replaces this page after a go.

Needed from Avi: the go/no-go decision at 26 Oct, 12:00 (via the lead).

30-SECOND PITCH (SAY IT YOUR WAY, ONLY AFTER A GO)

"Apna startup, 90 second mein! Problem chuno, aur Founder Agent ki team naam, logo, pitch aur ek live page banati hai. TV pe dekho company agent by agent banti hai."

What the visitor does (planned)

1. Scans the counter 2 QR on their own phone.
2. Picks a problem area and 2 to 3 quick chips (who it is for, the vibe). No typing needed.
3. Founder Agent assigns Research, Product, Brand, Finance and Pitch agents; the TV shows the company being born.
4. Follow gate, then the startup card and a live page link (expires after 7 days). Optional: "Isse AI Sharks ko pitch karna hai?" (counter 3).

Privacy lines you must say

- **"Startup ka naam aur text template se bante hain, tumhara typed text TV pe kabhi nahi aata."**
- **"Naam ya phone number mat likho."**
- **"Live page 7 din baad khud hat jata hai."**

Camera rule for under-18 visitors (filming crew): only hands and screens on camera.

Addresses

Visitor (standee QR): `play.zenithschool.ai/startup?c=2`
TV: `play.zenithschool.ai/tv/startup?c=2`
(TV path follows the app pattern; confirm at go)
Market sizes on screen are labelled "rough estimate".

Pair the TV browser first (`/staff` , normal Chrome), then kiosk, as in the Stall Runbook page 2.

On a NO-GO

1. Put the AI Startup Studio standee, tents and poster away (behind the counter, not on show).
2. Put 2 fallback tents on the table: **AI Jyotish** (`play.zenithschool.ai/jyotish?c=2`) or the generic **AI Experience** tent (QR to the hub `play.zenithschool.ai/`).
3. The counter TV then shows that experience's TV address (lead decides), or the idle hub screen.

File names: PRINT_SPEC.pdf, page 2 ("Which file to use").

Source: CHANGE-02 (BRAIN, 24 Oct) and the lead's print v5 brief (counter map v4). Placeholder written by the print task; no screenshots until the build passes.
